SilverStream

setup mysql and php (eg. pdflib)!

create database if not exists and grant all access to it

make sure that apache-tools (htpasswd) and tar is avialable on your system where you run the script from

activate mod_rewrite (and pdf.so)

Extract, for Unix systems use

```
./INSTALL.sh
```

to install, give installdir and mysql values copy or move extracted files to your webfolder (or install direct to your htdocs dir) remember to prepare your rights and executeables!

Extract cms.tar.gz: Manually for Windows/no-root-access systems load /BACKUP /db_cms_data.sql (or use SETUP.php) to your database if no root access then copy the files to your directory manually and edit

```
/authmysql/.htaccess
sqlcon.inc.php
config.php
/members/bkupsql.sh
```

and copy all files to your htdocs directory

or copy all files to your htdocs directory and run SETUP.php from your host

to get latest version: rsync rsync://linuxweb.net/cms/cms.tar.gz::
